#### Notes on the Collection.

M. H. Whittaker or 'Matt', to those who knew him, was a Manchester man who moved to Leeds and set up a Printers Supply Business.

He became the first man to build the American Linotype and Intertype composing and casting machines in this country and immediately started to modify the machines he installed to improve their efficiency and capability. The business grew as other composing and casting machines came on the market until Matt became one of the largest independent suppliers to the printing and newspaper industries.

Matt was followed mainly by his grandson Peter who carried on Matt's work on both supply and innovation until late in to the 20<sup>th</sup>. Century.

The association with Manchester came through dealings with Linotype who had a factory in Broadheath, Altrincham, employing some 2,500 people, and the large newspaper industry the City supported.

The Collection itself is a history of the composing and casting industry for the production of printing typefaces.

Information was collected by the Whittakers' from all over the world and creates a historical record from the days of floor casting type to the modern computer composing techniques.
