Level	Reference	Description	Dates	Admin History	S
	2005.73	Electrical Research Association council and committee minute books and binders, with indexes, 1913-1962	1913-1962	ERA was founded in 1920 funded jointly by the Department of Scientific & Industrial Research, industry and member companies. Prior to ERA, there had been no real facility for co-operative electrical research in the UK, although some research was carried out by a few manufacturers, suppliers and larger users of electricity. ERA filled the recognised gap in the organisation of the industry, by supplying research and technology innovation. During the 1939-1945 war, direct assistance to the war effort was given by ERA, having been recognised by the Ministry of Labour in 1941 as an 'essential undertaking'. Activities during the war included working on the development of radar and mine detection equipment. Majo new laboratories and offices were opened in Leatherhead, Surrey in 1957 which have remained the headquarters of the organisation ever since. Unt the late 1960s, ERA had derived much of its income from member company subscriptions and UK government grants. After 1969 ERA begar reorganising its mode of operation to reflect the rapidly changing technology base within the industries it served. This enabled the company to derive income from single client and multi-client projects. ERA became the first 'privatised' research association. In September 1979 ERA formally changed its name from The Electrical Research Association Ltd to its present name, ERA Technology Ltd. During the 1970s, 1980s and 1990s ERA continued to grow and develop into new research areas, including a wide range of engineering consultancy services for mechanical as well as electronic and electrical systems. In doing so it established itself as one of Britain's leading independent consulting organisations at the leading edge of technology development. In January 2001, the entire organisation. The trading operation, retaining the name ERA Technology, was run as a wholly commercial enterprise, responsible to its shareholders.	s T m remretil constructions functions functin

Scope & Content

The Electrical Research Association collection is made up of five series': Council minutes, research, indexes, a volume combining council minutes and research, and miscellaneous. The research minutes constitute the main body of the collection and make up thirty sub-series' of various research. For the research, the subseries' reflects the particular area of research led by a 'section' - from A-Z - of scientists/researchers. These sections were further made up of various sub-committees and panels, formed to conduct more specific research into that particular area, and are similarly titled by letter, with the exception of the very earliest minutes. Discussing issues limited to the areas of finance, budgets, personnel etc, the council minutes do not require a sub-series'. The number of items (volumes), notably within the research series, reflects the large amount of research that was conducted by the Association. With the exception of five spring-back binders, the collection is made up entirely of red bound volumes of minutes which run chronologically from 1913 and end in 1962.

Contains 30 Sub-Series' of research 26 Items of research covering the period 1913-57
